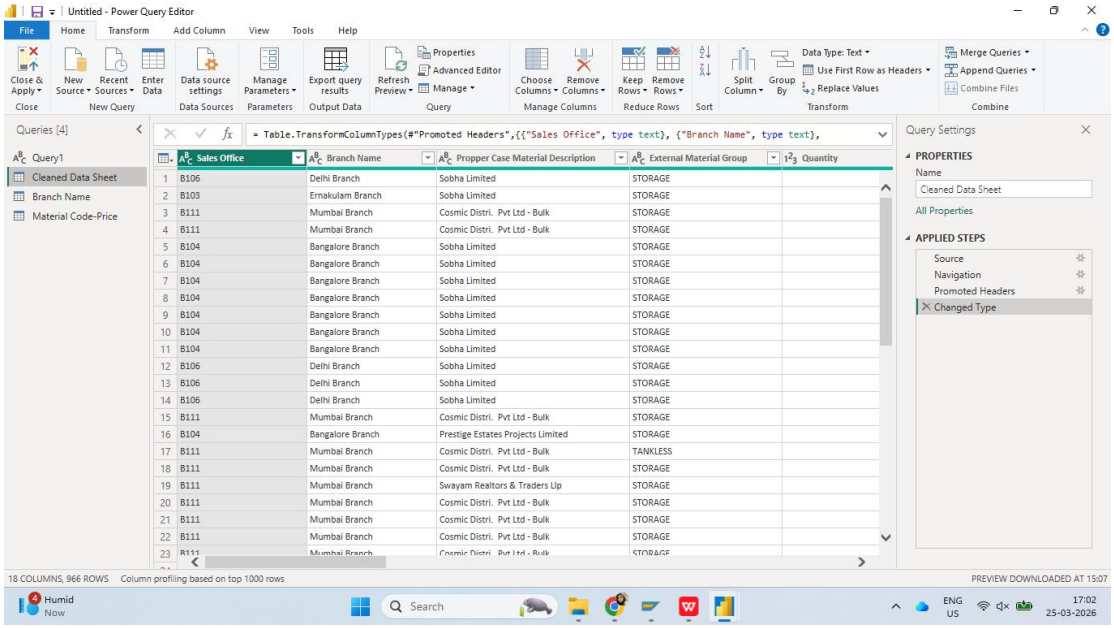
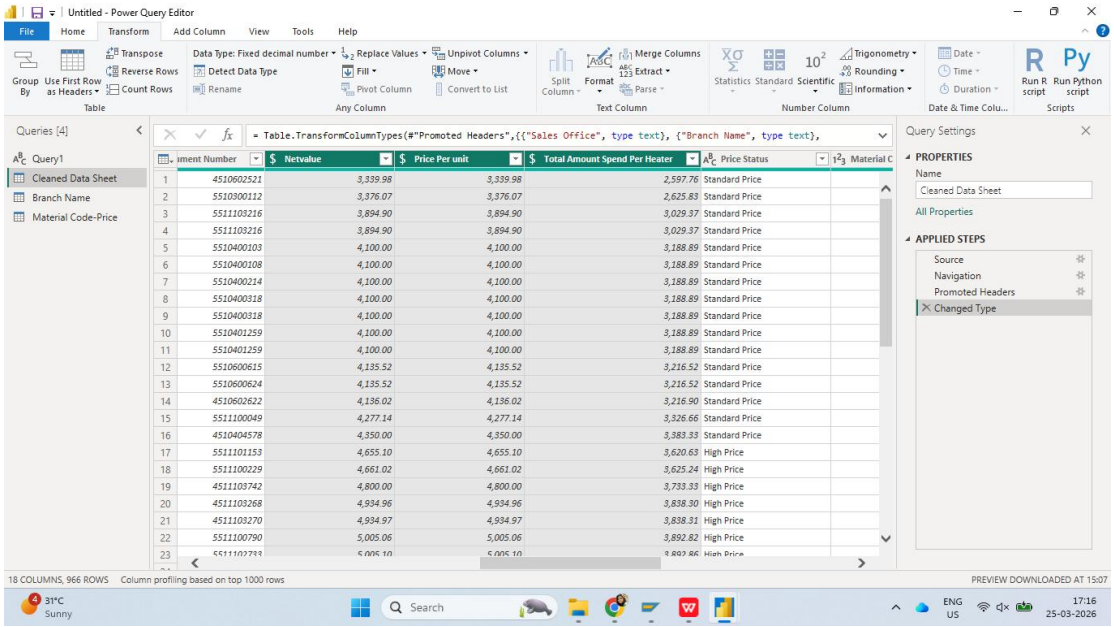
Project Dept Heater Sales Year Wise(2025-2026)

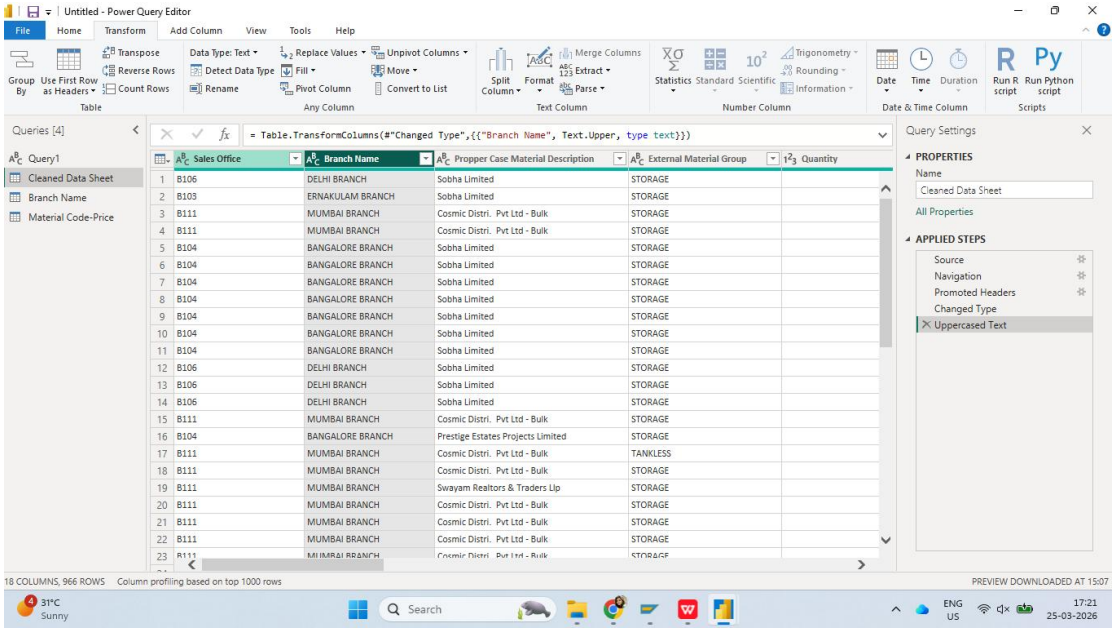
Power BI&Power Query:



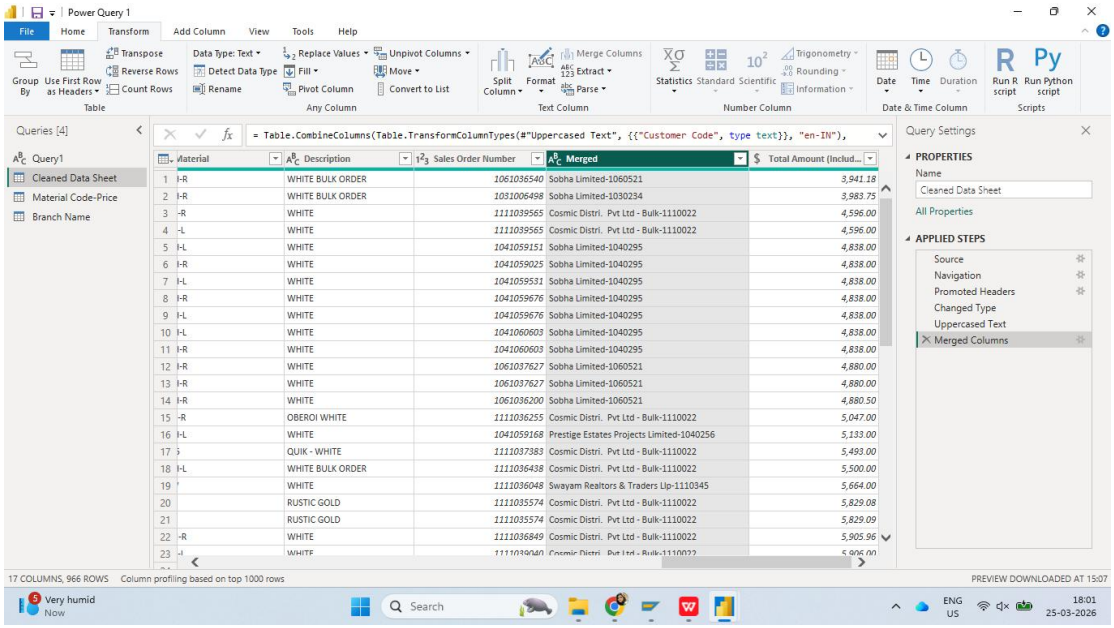
● Change the data type of Net Value,Price Per Unit,Total Amount Spend Per Heater columns to 'Fixed Decimal Number'.



Format the "Branch Name" column into Upper case, ensuring consistent capitalization for each word.

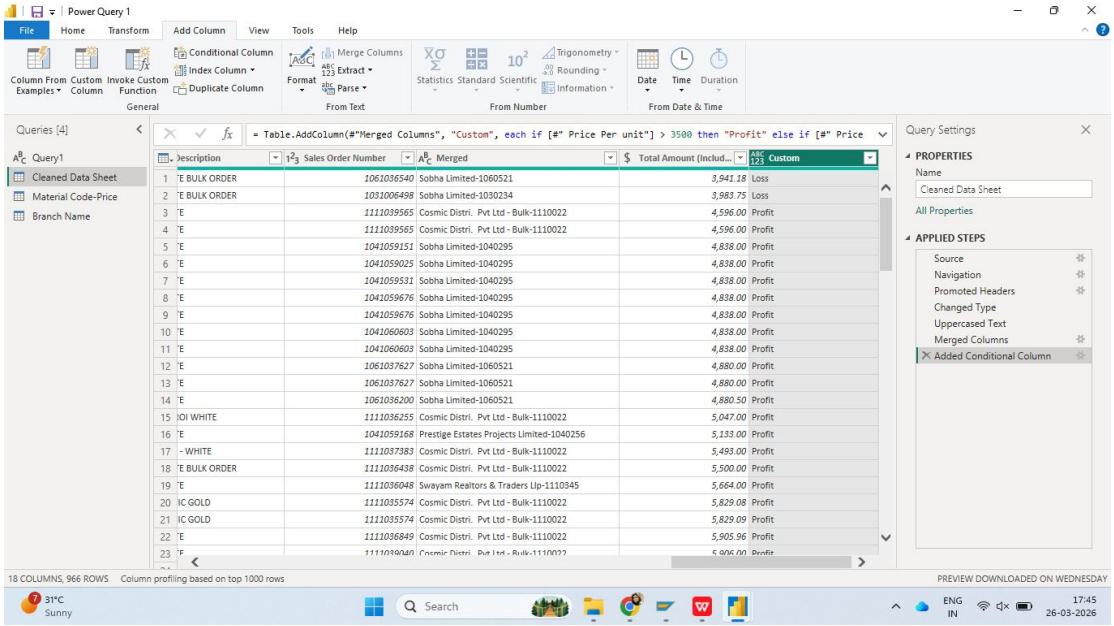


● Merge the Sales Office and Branch Name columns to create a new column named "Location" in the format Sales Office Branch Code



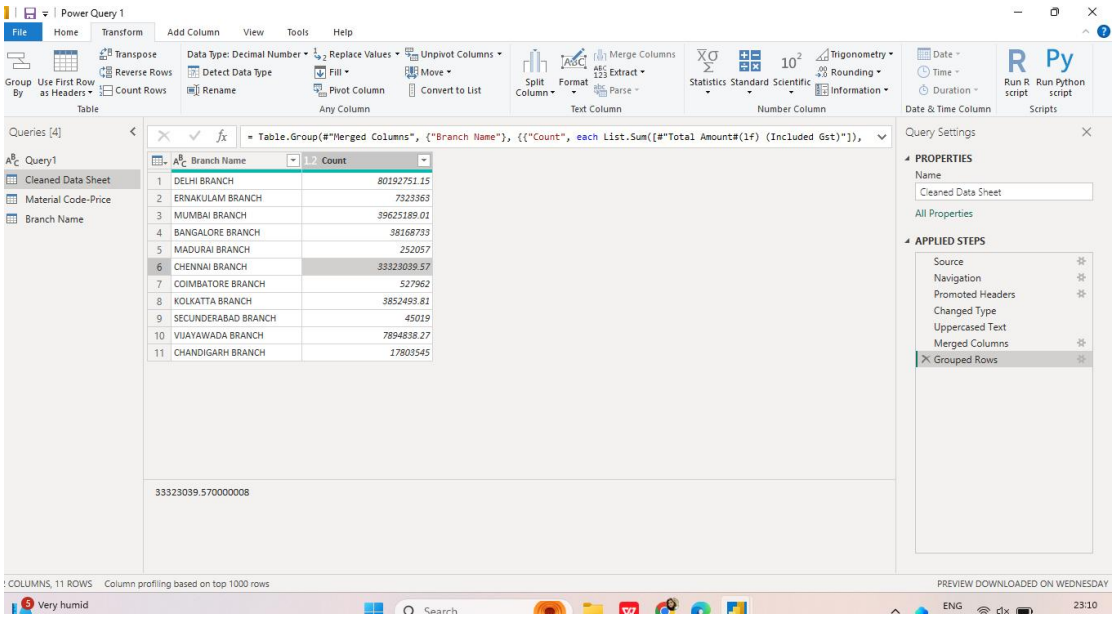
● Add a new conditional column named "Profit Status" based on the values in the "Profit" column. The conditions Price Per Unit: if the profit is less than <3500, the label

should be "Loss"; if the profit greater than >3500 profit.

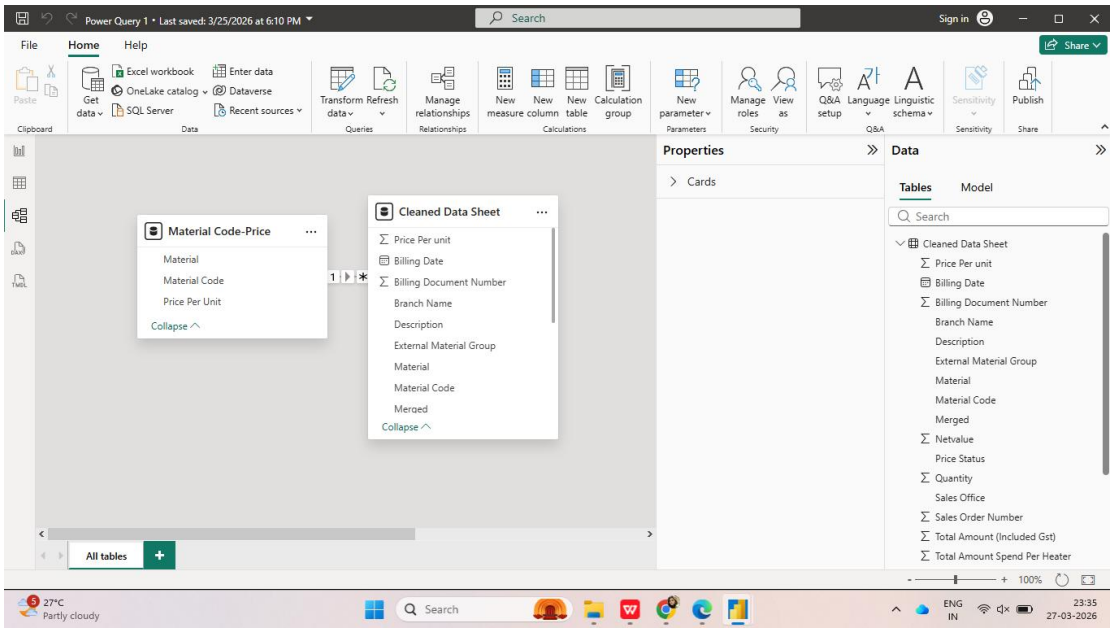


Grouping and Aggregating Data:

- Group of each Branch Name, count the value in total amount sales and sum the total valuesin branch wise

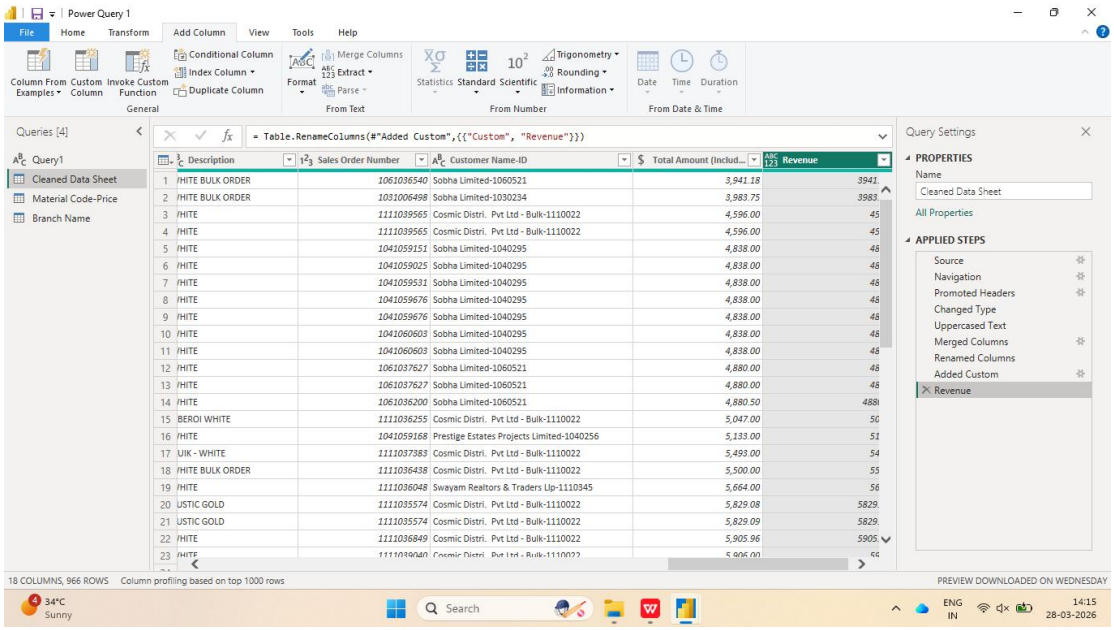


● Build a relationship between the “Cleaned Data sheet”and Material Code Price tables based on the ‘Material’ column and “Material Code” Click "Manage relationships" and ensure this relationship is active.



Calculated Column find Revenue

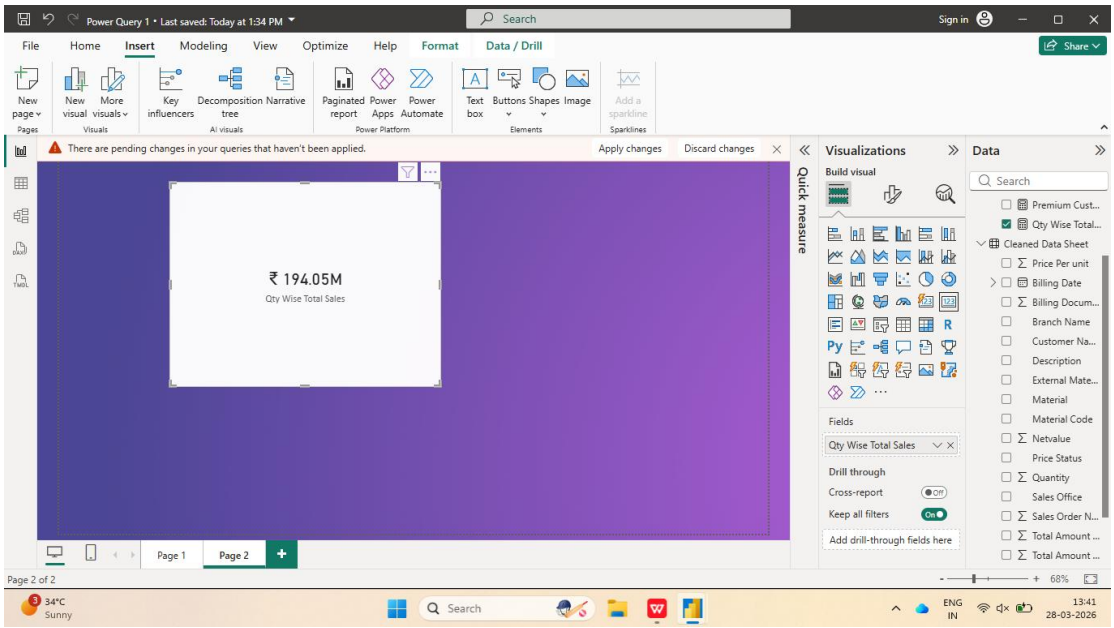
● Create a Calculated Column for Total Amount Spend Company vs Total Amount Sales



Create Dax table

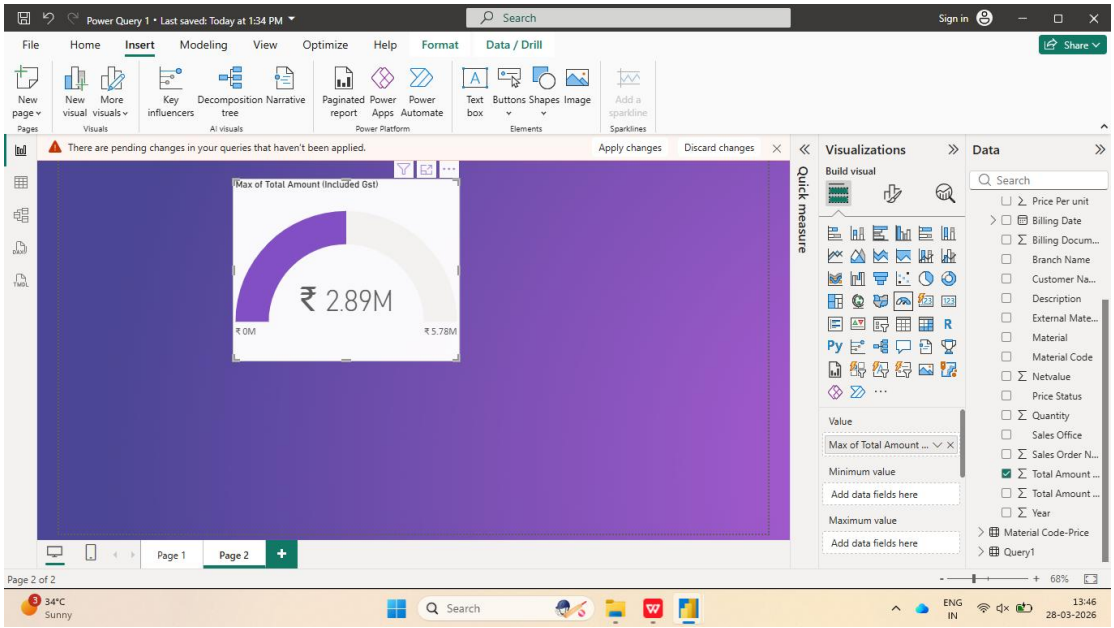
Calculated Card:

● Calculate Order Count: Define a measure to count the total number of Qty Wise Sales Using Measure Table



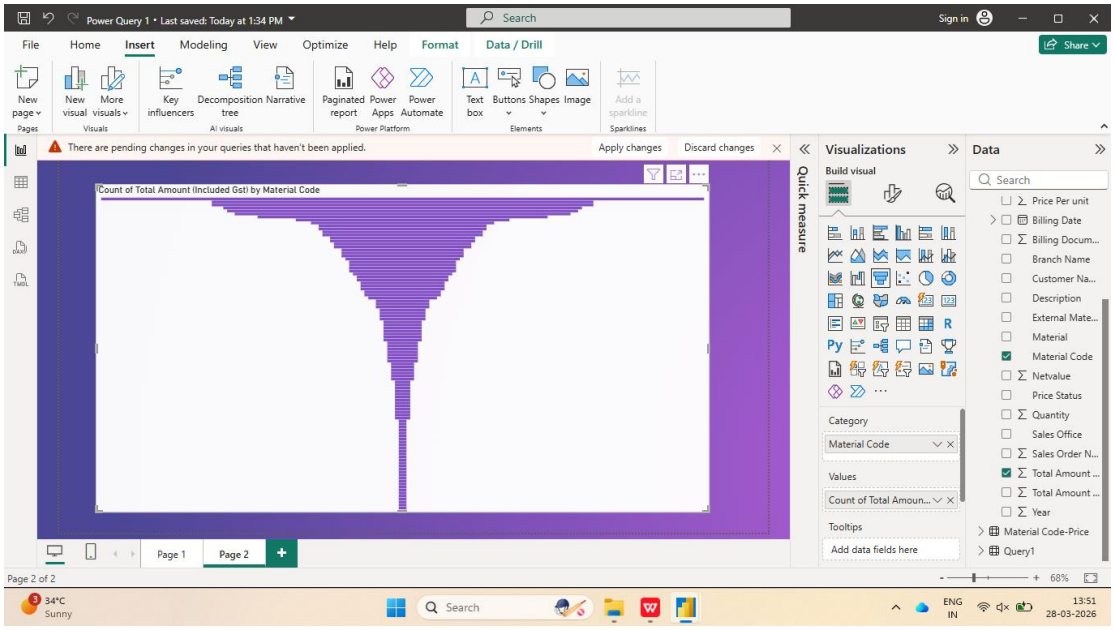
Visualization Guage:

● Visualization Guage: Define a measure to Sum the total amount



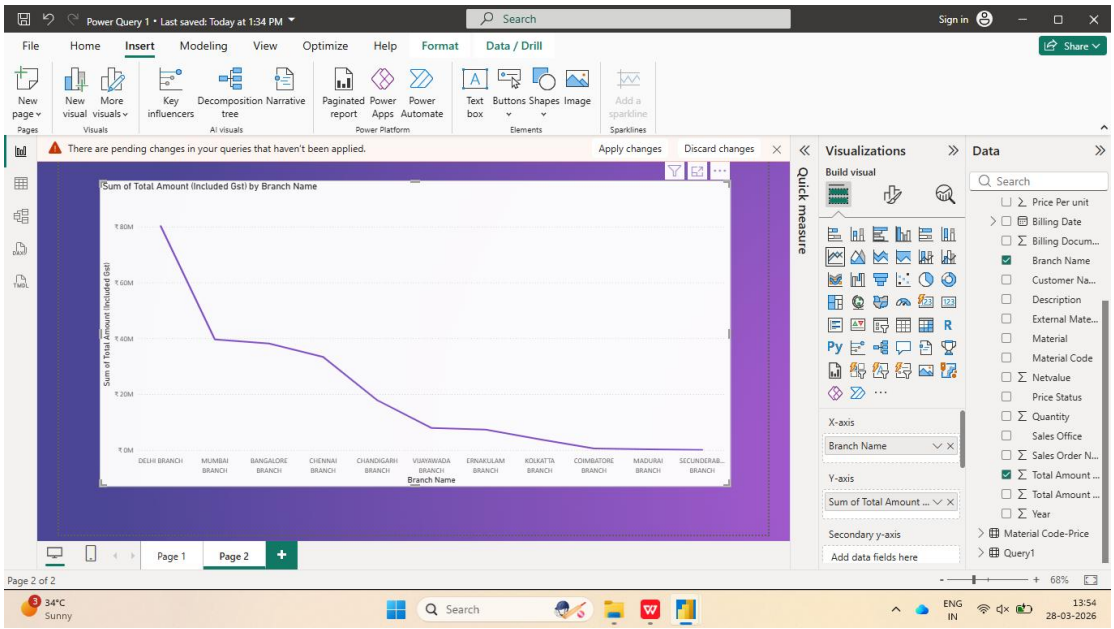
Visualization Funnel:

● Visualization Funnel: Define a Material Code wise Sales



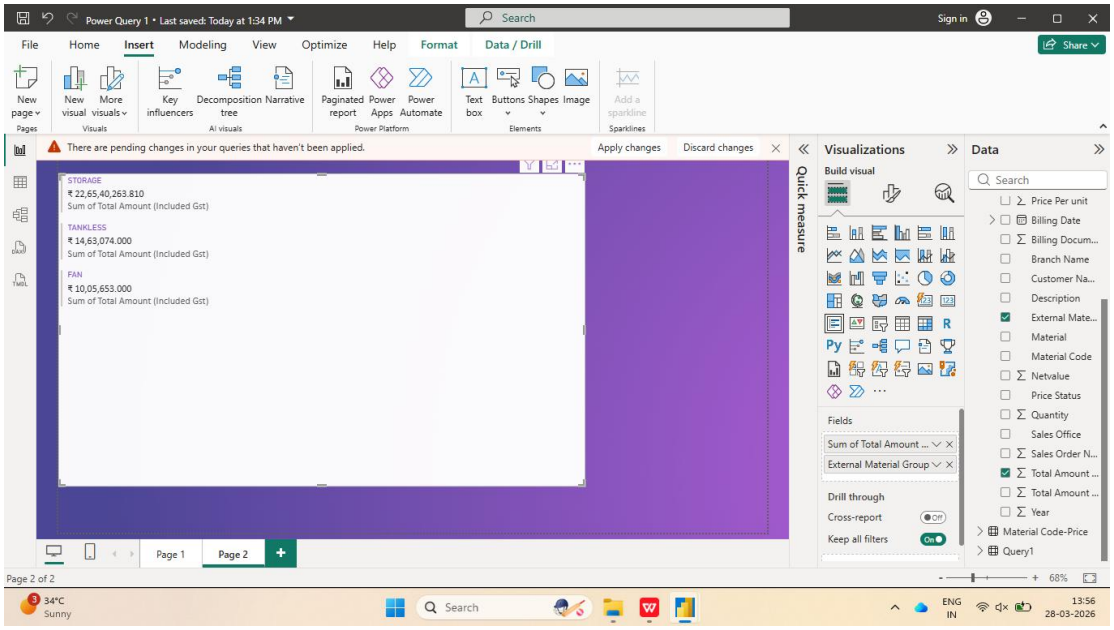
Visualization Line:

● Visualization Line: Define a Branch Wise Sales



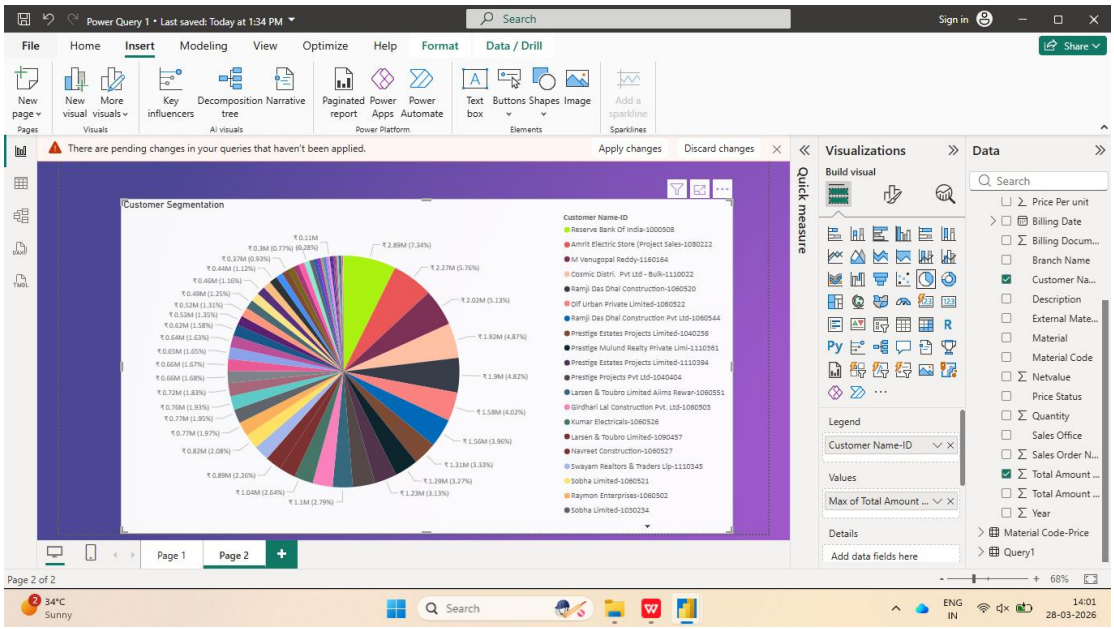
Multi Row Card:

● Multi Row Card: External Material Group Wise Sum of Total Amount Sales



Pie Chart:

●Pie Chart: Max Sales Branch Wise



Stacked Column Chart:
